SKILLS

- Java
- Selenium
- Manual Testing
- Junit
- TestNG
- Cucumber
- Maven
- Gradle
- Jenkins
- API
- Postman
- RestAssured
- JIRA
- GIT
- AGILE
- Functional Testing
- Regression
- Playwright
- Cypress
- JavaScript

CAREER OBJECTIVE

To obtain a job within my chosen field that will challenge me and allow me to use my education, skills and past experiences in a way that is mutually beneficial to both me and my employer and allow for future growth.

PROFESSIONAL SKILLS SUMMARY

- At Kapital information technologies overall with 4.2 years of experiences in area of software testing in both manual and automation testing in selenium WebDriver with Java.
- Experience in Banking and E-commerce domains
- Have strong experience in frameworks like Behavioral Driven Development (Cucumber), TestNG, JUnit, Page object (POM) and data driven frameworks.
- Good experience in writing X-paths to identify web elements
- Knowledge in Developing Functions for Framework.
- Using Maven as Software Build tool and Jenkins as Continuous Integration Tool.
- Hands on experience in Tracking and Reporting of defects using Defect Tracking Tool JIRA.
- Extensive experience in maintaining the code over version control using GIT.
- Performed testing like Smoke, Sanity, Regression.
- Participated in all the meetings of Agile-Scrum Methodology.
- Good experience in API with REST assured framework.
- Analyzing the API requirements from API documents and user stories.
- Performing different HTTP request methods like GET, POST, PUT, DELETE

EDUCATION

B.E[MECH] HINDUSTHAN COLLEGE OF ENGINEERING AND TECHNOLOGY,
2015 - 2019

WORK EXPERIENCE

Project 1 (Jimmy Choo)

2023 - PRESENT

Domain- Ecommerce

Jimmy Choo is a luxury fashion brand known for its high-end footwear, handbags, and accessories. The official website for Jimmy Choo is jimmychoo.com. On their website, customers can explore their latest collections of shoes, handbags, sunglasses, and other accessories.

- Collaborate with infrastructure teams to provision and configure test environments and ensure consistency between testing and production environments.
- Develop and maintain automated test suites for smoke testing and sanity testing to quickly assess the overall health and stability of the e-commerce platform.
- Participate in sprint planning and backlog grooming sessions to estimate testing efforts and ensure testing tasks are adequately represented in the sprint backlog
- Coordinate with customer support teams to triage and prioritize customer-reported.
- Designed and automated end-to-end test cases using Playwright for web applications, ensuring cross-browser and cross-platform compatibility.
- Implemented robust test scripts with Playwright integrated into CI/CD pipelines (Jenkins/GitHub Actions/Azure DevOps), reducing manual regression effort and improving release quality.
- Implement version control best practices using Git to manage test automation code and ensure collaboration and version tracking among team members.
- Develop and maintain test automation frameworks leveraging design patterns such as Page Object Model (POM) or Screenplay Pattern to enhance test maintainability and readability.
- Conduct exploratory testing sessions to uncover potential defects and usability issues not covered by existing test cases, providing valuable insights for further test refinement.

Project 2(P&T Luxembourg)

2021 - 2023

Domain – Banking

Java With TestNG

P&T Luxembourg, also known as POST Luxembourg, is a prominent financial institution based in Luxembourg. While it primarily operates as a postal service provider, it also offers a range of financial services, including banking.

- Implement TestNG parameterization for testing different data scenarios, such as valid and invalid inputs, boundary values, and edge cases, within banking applications.
- Coordinate with training teams to develop and deliver training materials for end-users and stakeholders on new banking features and functionalities.
- Conduct user acceptance testing (UAT) sessions with business stakeholders to validate that banking applications meet business requirements and user expectations.
- Develop and maintain test automation scripts for testing regulatory compliance features, such as anti-money laundering (AML) and know your customer (KYC) requirements.
- Conduct risk-based testing to prioritize testing efforts and focus on high-impact, high-risk areas of banking applications, Develop and maintain test automation scripts for testing reporting and analytics functionalities within banking applications, ensuring data accuracy and integrity.
- Coordinate with infrastructure teams to ensure that test environments are properly provisioned, configured, and maintained for testing activities.
