Phone: 9092966622 | Email: nunnavishal@gmail.com

PROFESSIONAL SUMMARY

QA Test Engineer with 3.3 years of experience in automation and manual testing, specializing in Selenium WebDriver automation frameworks. Strong expertise in BDD (Cucumber), TestNG, JUnit, API testing (Postman, Rest Assured), and CI/CD integration using Jenkins. Proven ability to design scalable automation frameworks, perform end-to-end testing, and ensure high-quality software delivery in Agile/Scrum environments.

Technical Skills

Category	Skills
Automation Tools	Selenium WebDriver
Frameworks & Design Patterns	Cucumber (BDD), TestNG, JUnit, POM, Data-Driven Framework, Hybrid Framework
API Testing	Postman, Rest Assured
Programming Languages	Java, JavaScript, TypeScript
CI/CD & Build Tools	Jenkins, Maven
Test Management & Tracking	JIRA
Version Control	Git
Database	SQL (Oracle – queries, joins, validation)
Methodologies	Agile Scrum, SDLC, STLC
Core Competencies	Automation Testing, Manual Testing, API Testing, Regression Testing, UI Testing, Cross-Browser Testing

WORK EXPERIENCE

QA Test Engineer L1 – Accenture Solutions Private Limited

Nov 2023 – Jan 2026

Manual Tester – Joy Technology

Aug 2022 – Jul 2023

EDUCATION

MBA (Finance - DDE) – Loyola College

B.Com (Corporate Secretaryship) – Agurchand Manmull Jain College

PROJECTS

Project 2: Core Banking Application Testing – JP Morgan Chase

Project Description:

Worked on a core banking application focused on validating end-to-end financial workflows such as account management, transactions, and customer data processing. The project involved both manual and automation testing to ensure system reliability, data integrity, and compliance with banking standards. The testing approach followed Agile methodology with continuous integration and delivery using modern automation frameworks.

Roles & Responsibilities:

- Developed and maintained automation test scripts using Selenium WebDriver with Java for regression testing.
- Designed and implemented BDD framework using Cucumber, writing feature files and step definitions.
- Applied Page Object Model (POM) and data-driven framework concepts to enhance reusability and maintainability.
- Performed manual testing including functional, UI, sanity, and exploratory testing for banking workflows.
- Executed regression and cross-browser testing to ensure application stability across different environments.
- Conducted API testing using Postman and Rest Assured, validating request/response and business logic.
- Performed backend validation using SQL queries to verify data consistency and integrity.
- Participated in Agile ceremonies such as sprint planning, daily stand-ups, sprint reviews, and retrospectives.
- Logged, tracked, and managed defects using JIRA, and actively participated in bug triage meetings.
- Integrated automation test suites with Jenkins CI/CD pipelines for continuous testing and reporting.
- Collaborated with developers and business analysts to understand requirements and improve test coverage.

Project 1: Web Application Testing - Zalando

Project Description:

Worked on testing an e-commerce platform focusing on validating core user journeys such as product search, cart management, and checkout process. The role primarily involved manual testing with some exposure to automation using Selenium and TestNG. Ensured high-quality releases through functional, regression, and cross-platform testing while collaborating in an Agile environment.

Roles & Responsibilities:

- Created and maintained detailed manual test cases and test scenarios based on business requirements.
- Performed end-to-end testing of key e-commerce features such as product search, filters, cart, and checkout flow.
- Executed functional and regression testing to validate application stability after new releases.
- Conducted cross-browser and mobile testing to ensure compatibility across different devices and environments.
- Logged, tracked, and managed defects using JIRA, ensuring proper defect lifecycle management.
- Verified bug fixes (re-testing) and performed regression impact analysis.
- Maintained test documentation and collaborated using Confluence.
- Performed localization testing to validate region-specific content, currency, and language behavior.
- Supported User Acceptance Testing (UAT) by coordinating with stakeholders and validating business scenarios.
- Developed basic automation scripts using Selenium with TestNG for critical test cases.
- Collaborated with developers, QA team, and business analysts in an Agile environment (scrum meetings, sprint activities).

DECLARATION

I hereby declare that the above information is true to the best of my knowledge and belief.
